PROFESSIONAL SUMMARY

Backend-focused .NET engineer with 5+ years of experience building enterprise internal systems and reporting-heavy applications. Core strengths in C#/.NET Core, T-SQL optimisation, and REST API architecture, with proven ownership of backend systems end-to-end, from schema design and stored procedure tuning to production incident resolution and stakeholder-facing reporting. Recently extended into AI/LLM engineering, designing RAG pipelines, embedding workflows, and voice-AI integrations. Proficient in Python/FastAPI for automation tooling and Angular for full-stack delivery, with hands-on experience delivering BI dashboards and real-time analytics platforms.

TECHNICAL SKILLS

Languages: C#, Python, SQL, TypeScript, JavaScript

Backend: .NET Core, ASP.NET Web API, FastAPI, REST APIs, OOP, GoF Design Patterns, Background Jobs, Event-Driven Architecture

AI & LLM: RAG, Prompt Engineering, OpenAI API, Embeddings, Azure Speech Services, Speech-to-Text

Frontend: Angular, AngularJS, RxJS, Component Architecture

Databases: MS SQL Server, T-SQL, Stored Procedures, MongoDB, Redis (caching)

Reporting & BI Tools: SSRS, RDLC Reports, Superset Dashboards

Cloud & Messaging: Azure Service Bus, RabbitMQ, Firebase, Azure DevOps, Docker

Auth & Security: OAuth 2.0, JWT, Google SSO, Azure Key Vault secret management

Practices: Agile, Scrum, Kanban, CI/CD, Code Reviews, Unit Testing

PROFESSIONAL EXPERIENCE

Senior Software Developer

Marcus Evans, Mumbai, India | October 2023 - Present

- Led and mentored a team of developers through sprint planning, code reviews, and structured mentoring, and rolled out a 12-week learning roadmap to onboard and upskill new team members.
- Owned backend development and ongoing enhancement of two internal enterprise products (ME:EM and CMS) built on .NET Core, Angular, and SQL Server, resolving recurring production incidents through root-cause analysis of legacy APIs, SQL procedures, and integration points.
- Designed and delivered SSRS and RDLC-based reporting solutions for multiple business teams, replacing manual Excel workflows with parameterised, scheduled reports that cut reporting turnaround and removed manual data reconciliation steps.
- Tuned T-SQL stored procedures, rewrote inefficient queries, and optimised database objects to fix deadlock patterns and long-running queries in a reporting database handling millions of rows across multiple business units.
- Integrated HubSpot CRM with internal systems using Python and Azure Service Bus, automating a bidirectional data sync that previously required manual exports and imports.
- Worked directly with business stakeholders to gather reporting requirements and translate them into maintainable backend solutions, reducing requirement re-work through structured upfront clarification.

Key Projects

- **Client Analytics Portal:** Built a unified analytics portal that consolidates data from two independent internal systems into a single reporting layer. Implemented Attribute-Based Access Control (ABAC) for fine-grained access management, Redis caching for frequently accessed datasets, and WebSocket-based real-time sync so users see data changes instantly. Created interactive Apache Superset dashboards and embedded them directly into the portal using guest-token based embedding.
- **Mobile Conference App:** Architected and built the complete backend for an internal conference mobile application, designing the database schema and writing optimised procedures for efficient data retrieval. Implemented a push notification service to alert users on their devices and managed cloud storage for images and PDFs uploaded by staff and users.
- **New Hire Tracker Portal:** Built an internal onboarding tracking portal using FastAPI with MongoDB as the database, Firebase Authentication, and Role-Based Access Control (RBAC) for access management. Connected Azure Active Directory to pull employee details across the organisation, replacing a manual HR tracking process.
- **TAP Budgeting Tool:** Worked on synchronising and extracting client financial data by pulling Excel files from SharePoint, parsing the details, and storing them in the database mapped to the correct users.

- **Linguarama Legacy Analysis:** Created automation scripts to render and crawl the Linguarama legacy platform, extracting webpage details into Excel to analyse the scope, effort, and time required to migrate the legacy application to a new platform.
- **Enterprise Client Intelligence & RAG Platform:** Designed a content-aware RAG ingestion pipeline with per-file-type chunking strategies, chunk validation, MD5-based deduplication, and a registry pattern to prevent hallucination from stale content. Built the data pipeline layer using Azure Speech Services, GPT-4, and ADLS Gen2, and implemented hybrid search (vector plus keyword) with re-ranking over unstructured call transcripts and CRM data.
- **Voice AI Agent:** Developed real-time audio streaming and transcript capture workflows using Twilio and LiveKit, integrated with CRM follow-up triggers to automate post-call actions. Engineered the LLM prompting layer with zero-shot and few-shot strategies and resolved retrieval failure modes in production.

Associate Software Engineer

TSS Consultancy - TrackWizz, Mumbai, India | August 2021 - October 2023

- Led development and enhancement of the Employee Trade Tracking (ETT) product, delivering full-stack features using Angular and .NET Core, including mobile-responsive UI and API layers for iOS and Android clients.
- Built and maintained ASP.NET Web Services for employee data integration across enterprise systems, handling data synchronisation, error handling, and payload transformation.
- Implemented Google SSO authentication across the ETT platform, integrating the OAuth 2.0 flow, managing token validation, and improving login security and user experience.
- Optimised SQL queries and stored procedures in MS SQL Server, resolving performance bottlenecks identified through query plan analysis and improving reliability of time-critical data operations.
- Delivered features iteratively in Scrum/Kanban sprints, collaborating with QA, business analysts, and product teams to ship stable, business-aligned increments.

EDUCATION

Bachelor of Science in Information Technology, University of Mumbai | SST College | 2018-2021 | CGPI: 9.20 / 10.00
